

Logos for use on the Reprage.com Lego Falcon 9 Rocket, Dragon, Dragon v2, and Orbcomm models. I attempted to make duplicates of everything. Some logos were cut from actual rocket pictures found on google images and others were copied from the AXM paper models found at <https://axm61.wordpress.com/category/space-x-missions/>. My artistic abilities are rather lacking, so I attempted to throw something together that would look find on my shelf. I printed out on Avery 53203 decal paper. The decals do tend to come loose at times, so I may possibly use a spray adhesive in the future. Contact: teamfatkid at g mail

use below for grid fins. cut as needed

Dragon capsule will need to be trimmed and possibly cut into sections to properly fit. Use your judgement. 2 additional of each was provided to allow room for mistakes. Solar panel fairings will also need to be cut and adjusted to fit.
